PROJECTS

DataGPT

KFU

The graduation project. A Web-based system for preprocessing datasets using the capabilities of ChatGPT-4. The system helps both experts and non-experts preprocess datasets in any field, providing suggestions to improve data quality and additional features.

Siraj HR and Task management System

Fantastic Hosting for IT Solutions

An absolute HR and task management system that reduces the overhead and paperwork. I contributed as a project manager and tester for both the web and mobile versions.

Muean

SOCFA Hackathon 2024

A web-based system that helps non-profit organizations in management accounting, KPIs analysis and evaluation, BSC, and forecasting. My role was software engineer and LLM prompt engineer.

ERP system for Car services company

Fantastic Hosting for IT Solutions

Led the end-to-end implementation of an ERP system tailored for automotive service operations. Oversaw requirements gathering, vendor coordination, and system integration across departments, including inventory, maintenance scheduling, finance, HR, Insurance companies, and customer management. The system comprises three

mobile applications and one comprehensive web-based system for the organization's employees.
